

Microsoft SharePoint – Open Text Livelink

Combine or replace in 2012?

Open Docs offers you a free Knowledge session at your office where we will show you how SharePoint 2010 and Open Text Livelink / Content Server can complement each other.

Then we will share our practical experience in migrating Livelink to SharePoint (2 customer experiences with over 20,000 users - site visit possible). Besides project experience we can show you our standard documents and tools we have developed gradually (like content, metadata and audit migration). Finally we will share with you how our customers have reached the decision to migrate from Livelink to SharePoint.

After sharing experiences, together with you we will determine what the maturity level of your organization in the area of ECM is and how you are currently utilising Livelink. Finally we can help you decide whether a pilot project makes sense at all.

Speed up your IT plans for 2012 and call us at +31 (0) 736 409 304 (ask for Bart Schepers) or send us an email at info@opendocs.nl.
